

If use IRLML6401, maximum input voltage: 12V;
If use IRLML6402, maximum input voltage: 20V;
Or use any other analog MOSFET;

DNI(R1) and DNI(R2) are using for programming of output voltage (TPS79301). According to datasheet of TPS793 IC, for +3.3V output voltage: DNI(R1) = 51k, DNI(R2) = 30.1k;
